

# School Board Energy Conservation Portfolio

Carbon offset proceeds resulting from the portfolio are reinvested by the school boards into additional greenhouse emission reduction projects and climate change related education and programs.

## Pointe-de-l'Île School Board Energy Efficiency Project / Commission Scolaire de la Pointe de l'Île (CSPI)

**CSPI** is contributing to the fight against climate change with the implementation of energy efficiency measures, greening of school grounds, improved recycling and composting programs, etc. Additionally, **CSPI** created the Pointe de l'Île Foundation whose mission is to “fight with all means against the scourge of dropping out of school, which too often leads to social exclusion in our youth and thus threatens the future of our society”.

## Patriotes School Board Energy Conservation Project / Commission Scolaire des Patriotes (CSP)

**GHG** emissions related to the combustion of natural gas are being reduced thanks to more efficient boilers, advanced control system and other energy conservation measures. In addition to striving to constantly improve the energy performance of its schools, the **CSP** is taking up the challenge of reducing the ecological footprint of its travel. It invests in charging stations and electric vehicles for service employees.

## Lester B. Pearson School Board Energy Conservation Project / Commission Scolaire Lester B. Pearson (CSLP)

The emission reductions are the result of lower energy consumption and the use of less **GHG**-intensive energy sources. Project technologies include solar walls, reflective walls, thermal accumulation, **HVAC** controls, heat recovery, etc. Funds raised through the sale of carbon credits, in addition to reducing **GHG** emissions, help support academic success and eco-citizenship education.
